

 **WYZER** WORK

The Challenge

In today's world, organisations are expected to offer services to their clients in a digital, user-friendly and seamless manner. Through traditional software methodologies, it is hard for such organisations to revamp their business models and daily operations to a manner that is appropriate for today's digital age. The agile organisations of the future need to rethink the way they approach software in order to find the right balance between innovation, continuity and providing a great customer experience.

Wyzer Work enables organisations to seamlessly transition into the digital world by providing a suite of tools with which such organisations can interact effectively with their customers, manage internal processes and collaborate in the digital world.

Our Solution

Wyzer is an EU based Artificial Intelligence company. We built **Wyzer Work** where we adopt a low code approach that aims to empower every employee within an organisation to become a citizen developer by effortlessly building intelligent digital operations without needing specific technical knowledge. We utilise AI and predictive models to add efficiency into any company processes.

We have seen that companies all over the world are struggling to take the next step in digital transformation into the world of intelligent automation. Despite the scientific advancements made in the field of Artificial Intelligence, very few companies are actually able to supply such technology in a manner that benefits their day to day operations. Wyzer aims to bridge that gap. Our mission is to enable organisations to seamlessly digitise their business processes and automate the mundane tasks that take up valuable time from their employees.

Traditional Office Work

WYZER WORK

Benefits

Low Code Approach

Wyzer Work allows for the development and continuous adaptation of enterprise software systems without requiring software developers to get involved. This allows organisations to turn time-consuming manual steps into automated, efficient workflows.

Corporate Productivity

Wyzer Work ensures that employees have the time to focus on what matters most by reducing the workload of manual tasks and replacing it with intelligent automation.

Employee Empowerment

Wyzer Work empowers every employee to become a citizen developer who can contribute towards providing the best possible customer experience in the digital world.

Enterprise Agility

Enterprise systems are traditionally very hard to make changes to. This generally means that traditional enterprises are not able to experiment rapidly and quickly fix bottlenecks in their processes. By allowing citizen developers to make changes to enterprise systems themselves in a visual manner, Wyzer Work enables organisations to become Agile and to gain the ability to quickly experiment and adapt to change.

Process Efficiency

Wyzer Work allows organisations to rapidly identify bottlenecks within processes and actively suggests improvements that may be made in order to improve efficiency.

Team Mobility

Wyzer Work allows organisations to offer the top quality services and experiences to their customers, no matter where their customers or employees are based. Customers and employees are always connected - all they need is a browser and an internet connection.

Features

Easy Modelling of Processes

Wyzer Work empowers business users to design and roll out their processes and forms quickly with little to no coding. It does this by providing a visual drag-and-drop process builder with which users can create and modify business processes as easily as they would create or modify a flowchart.

Drag and Drop Form Builder

Organisations regularly need to gather data from their clients. The nature of the required data may need to change periodically or on a case-by-case basis. Wyzer Work allows citizen developers to build their own forms and user interfaces that are capable of collecting a variety of different types of data.

Document Generation

Many client interactions end up being summarised in the form of standard documents. Wyzer Work allows for the generation of PDF documents in a seamless manner this allows for documents to be generated at runtime according to the context of the business process in which they were created.

Digital Signatures

It is common for organisations to require clients to sign particular documents and agreements. Wyzer Work uses standard algorithms in order to enable legally-binding and compliant electronic signatures. Wyzer Work can cater for Simple, Advanced and Qualified electronic signatures - according to the nature of the document being signed.

Data and Document Management

All data and documents produced by Wyzer Work are stored in an easy to access system-wide repository. Data is presented in real-time dashboards and is searchable.

Roles, Permissions and Access Management

Wyzer Work integrates with various authentication providers in order to enable single-sign-on across all software products within an organisation. It also allows for a very granular definition of roles and permissions ensuring that confidential data is protected and may only be accessed by authorised personnel.

Analytics

Wyzer Work offers real-time intelligent monitoring of business processes and KPI measuring which can be exported as reports.

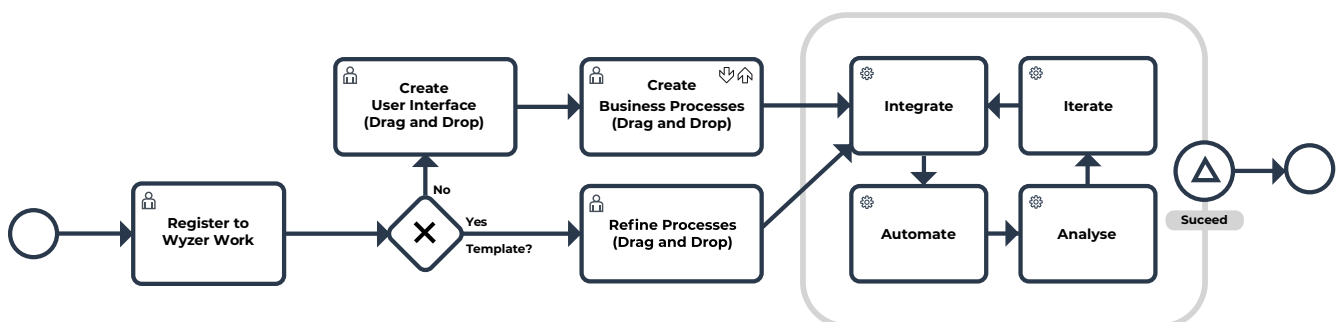

Connectors and Extensions

Wyzer Work allows organisations to extract additional value out of their business systems by integrating them into business processes.

On-Premises or Cloud Deployment

Wyzer Work may be deployed on-premise or fully on the cloud in a Software-as-a-Service manner.

Who is Wyzer?

Wyzer is an EU-based technology Company. Our team is made up of technology-oriented problem solvers that offer products and services to enterprises to ensure that they flourish in the digital world. Our goal is to change the way people work to become more digitalised.

To achieve this goal, we plan to assist other companies to automate their processes to help them become more efficient through the use of technology. This, in turn, will guarantee that our clients will offer better customer experiences.
